1 About this guide

Purpose

This guide helps students sign in, submit a thesis, review findings, download reports and manage saved records. Follow the numbered steps and use the red boxes, arrows and labels in each illustration to locate controls.

Scope

This guide covers the student interface available in November 2026. Use the official student access link. After updates, follow the current page prompts if minor layout differences occur.

How to use this guide

Figures 01–23 cover corresponding operations in each language; a procedure may use two figures. Counts, times and accounts in screenshots are illustrative.

Thesis privacy

Other users’ thesis text is not shown. Use your own report and review its findings against the original thesis.

Using the results

The system provides assisted checks and suggestions. It does not replace review by a supervisor, school or university. Check each finding against the thesis and university requirements. No findings is not a certificate of compliance.

2 System overview

The system assists with thesis compliance checks, including formatting, wording, bilingual content and selected claim–evidence checks. Findings link to PDF pages. You can read available findings during a review, then revisit and download the saved report after completion.

Before you begin

- Your own working SJTU jAccount.
- The degree thesis to review: a text-based PDF, no larger than 50 MB. Do not upload an unrelated PDF, a scan or an image-only PDF.
- The Word or LaTeX source file, so you can make and verify revisions yourself.

Recommended workflow

1. Sign in
2. Upload thesis
3. Choose checks
4. Start review
5. Verify findings
6. Edit source
7. Upload revision

For a first review, follow Chapter 3 in order. For an existing report, go to Chapter 4. Chapter 5 covers notifications, emails, preferences and feedback.

3 Starting a review

3.1 Sign in

Open `https://thesis-review.sjtu.edu.cn` in your browser and sign in with your own SJTU account. You can choose the interface language before signing in.

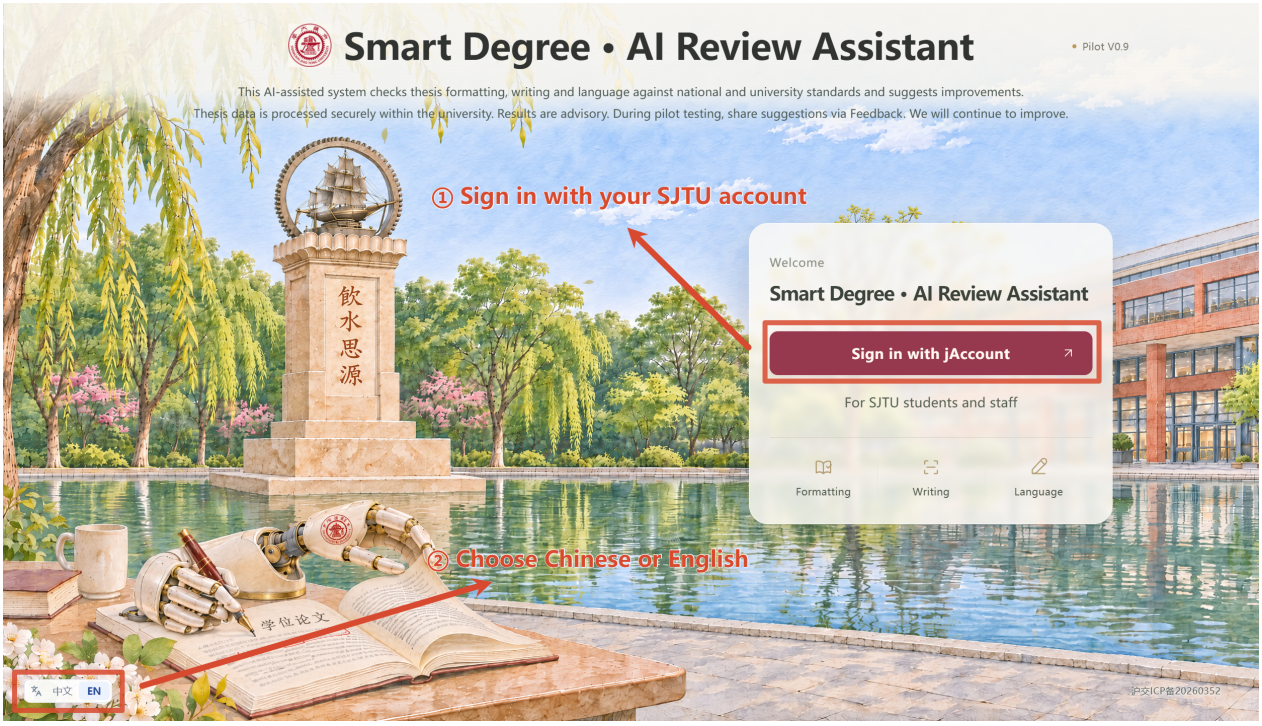

Figure 01 Sign-in page and language selection

1. Select 中文 or EN at the lower left.
2. Select Sign in with jAccount and follow the university authentication prompts.
3. After signing in, open Upload thesis. If you followed a report link in an email, you will return to that report.

> Use the same account that submitted the thesis to open its report. Sign out when you finish on a shared computer.

3.2 Choose your thesis PDF

Select Upload thesis in the sidebar. Click the upload area to choose a file, or drag it into the area. Submit one thesis at a time.

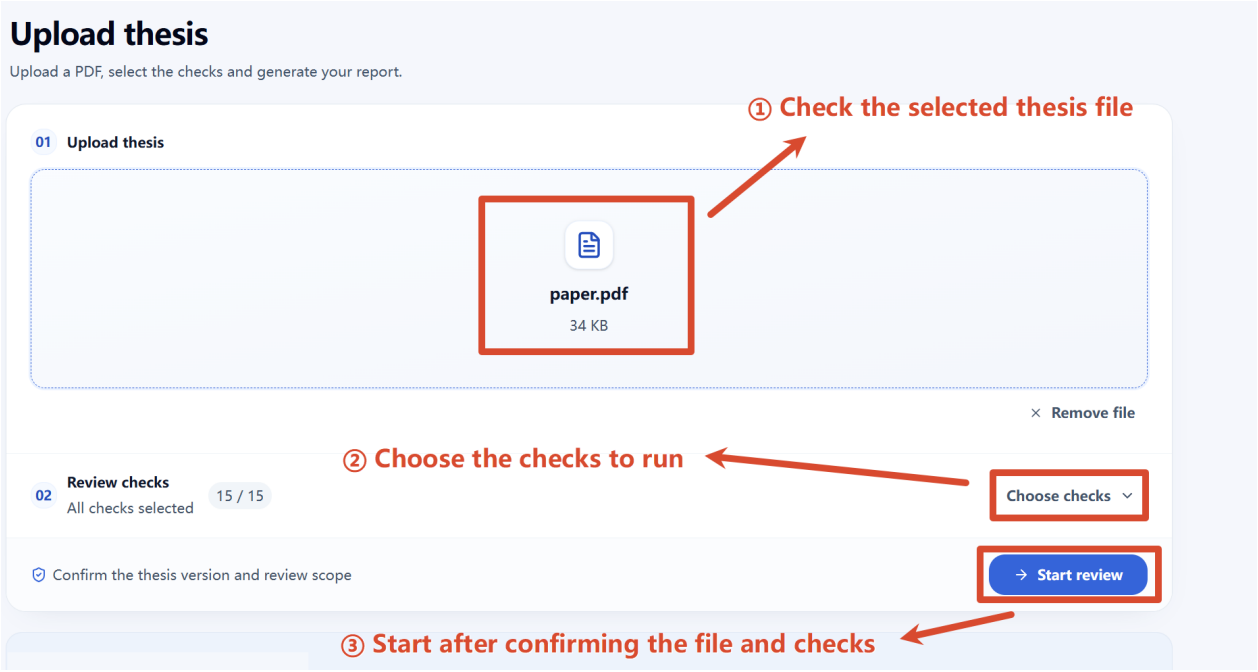

Figure 02 Confirm the thesis file before starting

1. The file must be the degree thesis you want to review. Do not upload an unrelated PDF.
2. Use a text-based PDF with selectable, copyable text, no larger than 50 MB. Scanned or image-only PDFs are not supported.
3. Check the displayed filename and version. Remove an incorrect file before choosing another.
4. Open Choose checks, confirm the scope, and select Start review. Check selection is explained on the next page.

Before uploading, try selecting and copying a paragraph in a PDF reader. If the text cannot be selected, export a text-based PDF from the Word or LaTeX source.

3.3 Select checks and check your allowance

Expand the check selector and choose the relevant checks under Formatting, Content, and Claims and evidence. The selected-check count updates as you make changes.

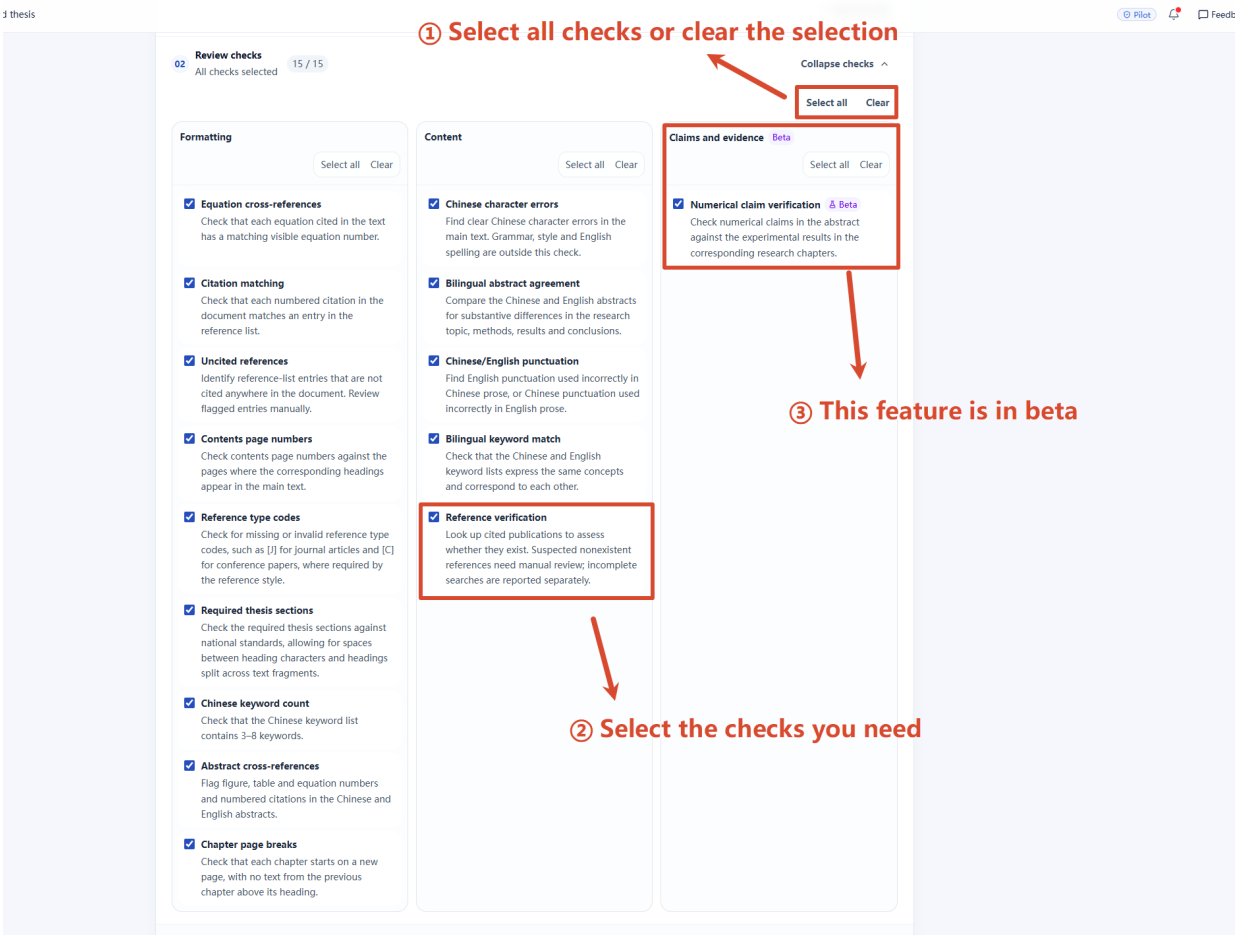

Figure 03 Check selection; the purple flask indicates a beta feature

1. Use Select all or Clear for the whole list or a group, or select individual checks. Keep at least one available check selected.
2. Read each description to understand its scope. A purple flask marked Beta identifies an experimental feature; review its results carefully.
3. Confirm the file and checks, then start. Regular users can generate up to three reports per day. The allowance resets at 00:00 Beijing time.

Only successfully generated reports count. Failed or cancelled reviews do not count. Active tasks temporarily reserve capacity. New and resumed reviews share the allowance; deleting a report does not restore a use.

3.4 Track progress or stop a review

The page shows upload, queue and check progress. The estimated time changes with processing conditions and is not a guaranteed completion time.

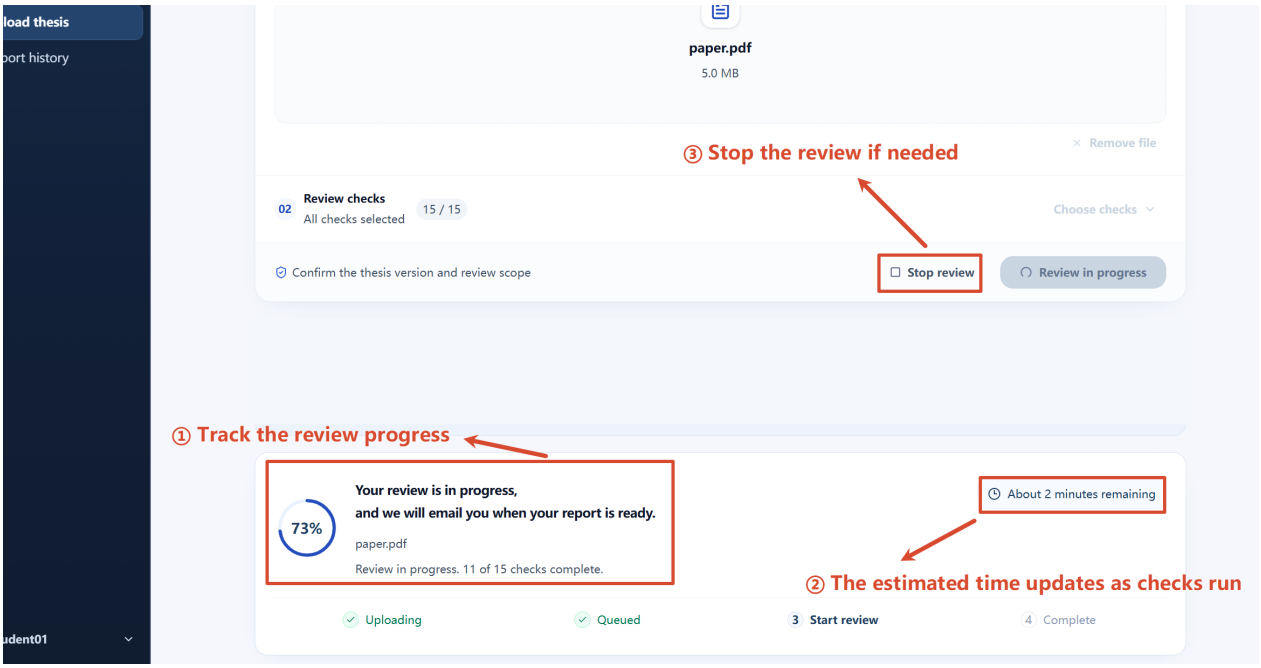

Figure 04 Progress, changing time estimate and the stop control

1. Read the current stage, completed-check count and time estimate. Do not repeatedly submit the same task while waiting.
2. To stop, select Stop review and wait for the server response. The task is stopped only when cancellation is confirmed.
3. If the system says the review is already complete, open the report or view it later. This is not a successful cancellation.

A successfully cancelled review does not produce a completion report or send its completion email. Email already accepted by a mail server cannot be reliably recalled. You can return through Notifications or Report history. A green check on the progress bar marks a completed stage, not a thesis without issues.

3.5 Read results while checks are running

The live report shows available findings while other checks continue. Counts may change as more checks finish, so this is not the final review outcome.

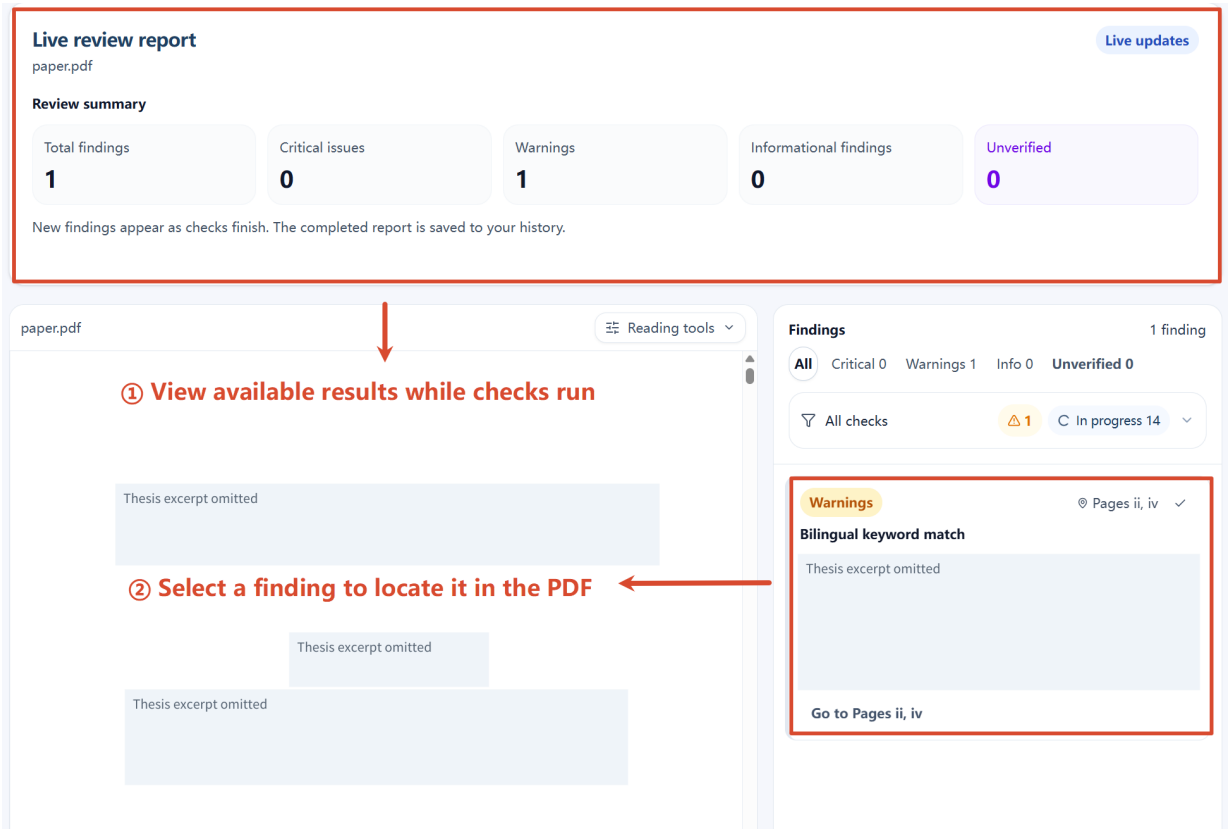

Figure 05 Live report with thesis excerpts omitted

1. Read the summary for the findings returned so far.
2. Select a finding or its Go to Page link to locate the relevant thesis page.
3. Watch for the blue-grey spinner and In progress status. After completion, review the saved report and check execution statuses.

A notice may appear while English explanations are being prepared. Wait for them to become available. Quotations and filenames retain their original language. Thesis excerpts are hidden in this guide; displayed counts are illustrative.

4 Reading and managing reports

4.1 Read the summary and review scope

First confirm the file, then read the summary and review scope. The finding count does not mean that every selected check ran successfully.

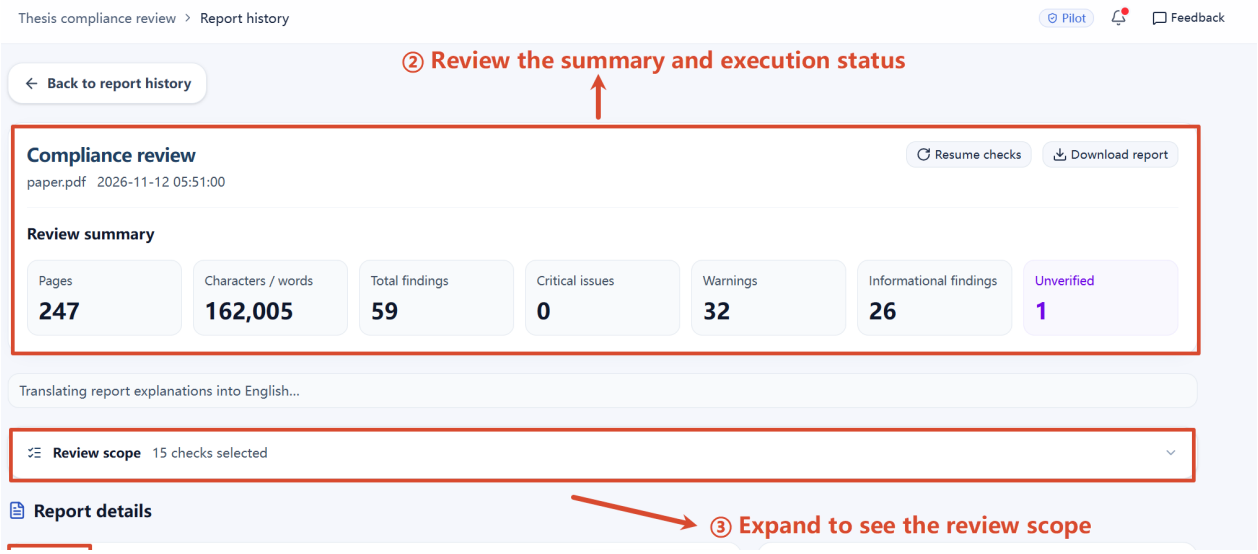

Figure 06 File identity, summary and review scope

1. Check the filename and report time to avoid reading a report for an older thesis version.
2. Review the Critical, Warnings, Info and Unverified counts. A dedicated badge guide in this chapter explains the colours and icons.
3. Expand Review scope to see the selected checks. Also inspect execution statuses in the check filter to decide whether to resume checks or review an item manually.

Zero findings is not a certificate of compliance. Read the explanations for checks that failed, were incomplete, were not applicable or could not reach a conclusion.

4.2 Read findings alongside your thesis

Report details contain a PDF pane on the left and findings on the right. Each pane scrolls independently. Read the explanation, then check the surrounding thesis text.

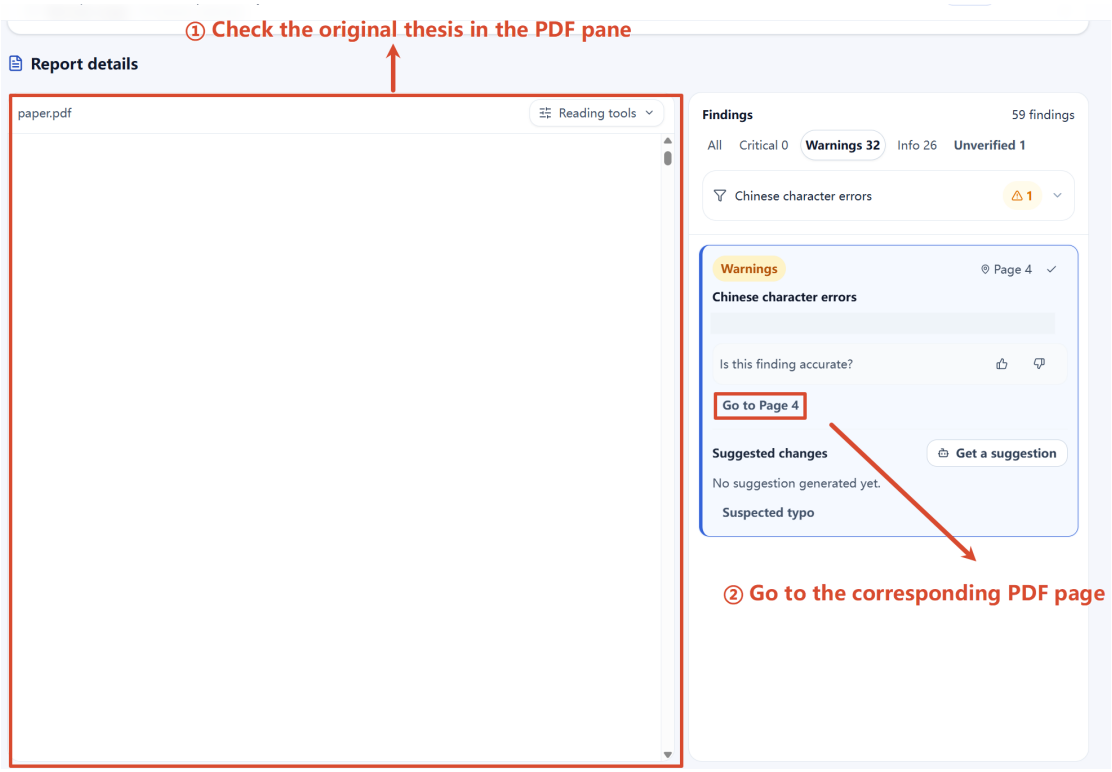

Figure 07 Linked PDF and findings panes; thesis text is hidden

1. Select a finding or its Go to Page link to navigate to the relevant page.
2. A highlight may appear when a precise location is available. A page-level finding may navigate without an exact highlight.
3. Use the thesis context to decide whether a change is needed. Do not revise solely on the basis of a rule name or badge colour.

Printed thesis page labels, including Roman numerals, may differ from PDF page order. The reading-tool input uses PDF page order; finding cards may show detected thesis page labels. The card checkmark is a temporary handled marker: it resets on refresh and does not edit the thesis.

4.3 Use the reading tools

Select Reading tools at the upper right of the PDF pane. These controls change the view without editing the thesis, findings or check statuses.

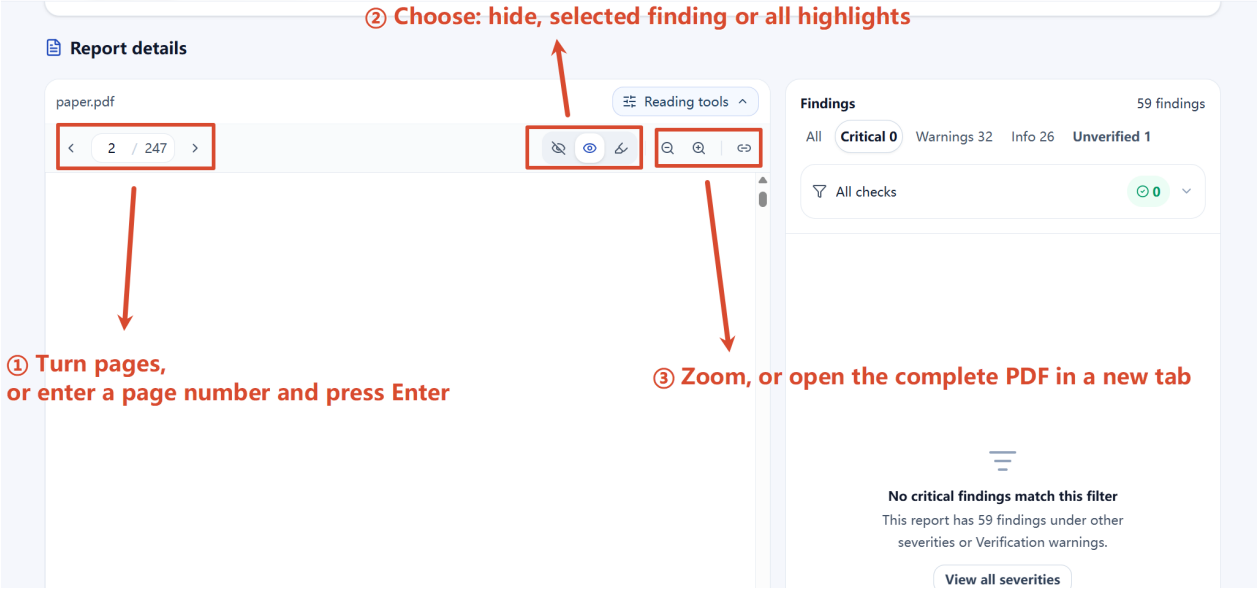

Figure 08 Pages, highlights, zoom and original-PDF controls

1. Left/right arrows: previous/next page. Page input: enter a valid PDF page number and press Enter.
2. Crossed-out eye: hide highlights. Eye: show the selected finding's highlights. Highlighter: show all available highlights.
3. Minus/plus magnifiers: zoom out/in. Link icon: open the complete original PDF in a new tab.

The new tab opens the original thesis PDF, not the review report. To save findings, use Download report.

4.4 Filter by category or check

For a long list, first choose a finding category, then narrow the view with the check dropdown. Filtering changes what is shown; it does not delete findings.

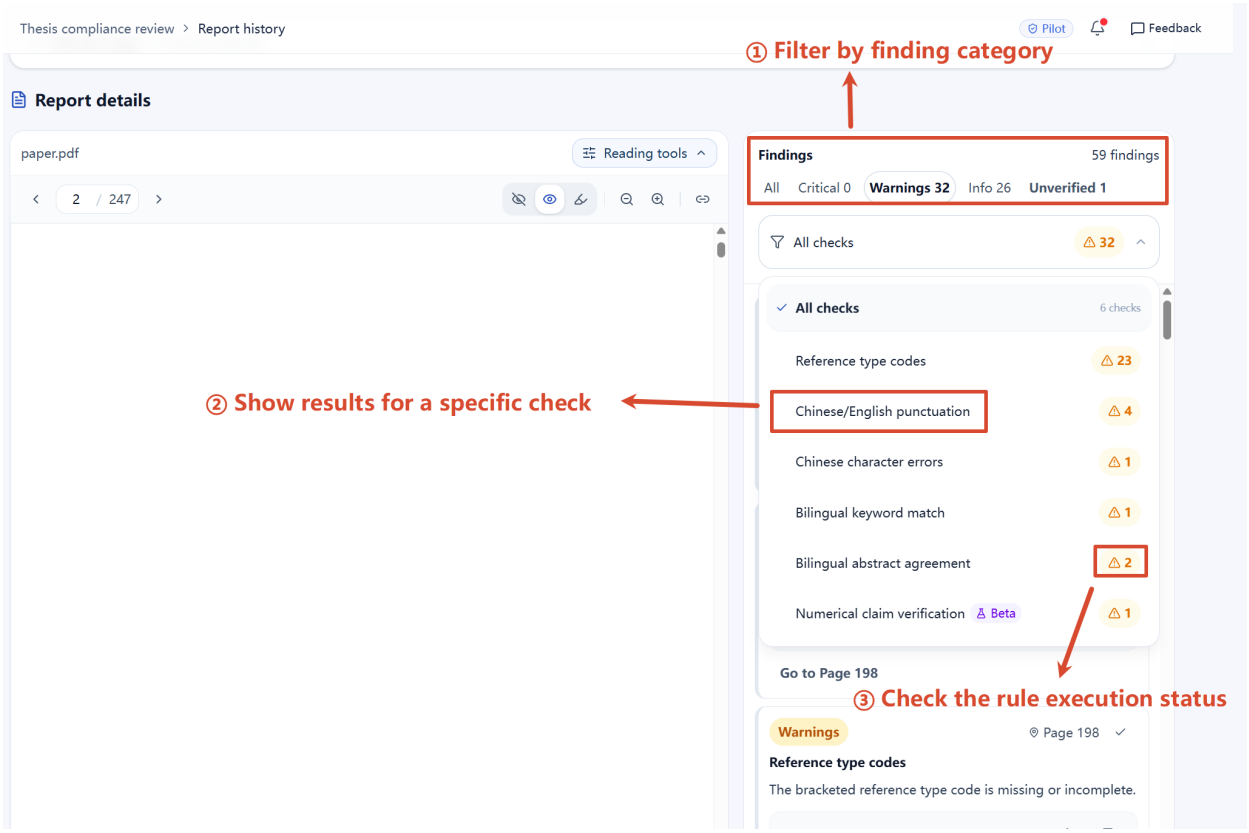

Figure 09 Category/check filters, with count and status badges

1. Choose All, Critical, Warnings, Info or Unverified. Select All to restore all categories.
2. Select a specific check in the dropdown, or choose All checks to restore the full scope.
3. Read counts and badges beside each check. A warning triangle with a number usually counts findings; spinners, shields and other icons have different meanings, explained next.

Running checks may remain visible in the live-report filter. An empty filtered list does not mean the report has no findings in other categories.

4.5 Understand badge colours and icons

Use the icon, label, number and current filter together, rather than colour alone. Background shades vary with the light/dark theme; these examples use light-theme colours.

Badge	Meaning and use
⊗ Critical	Red circle with a cross: a finding to prioritise. The number counts critical findings in the current scope.
⚠ Warnings	Amber warning triangle: an issue to check. The number counts warnings, not failed checks.
ⓘ Info	Blue information icon: an informational finding or item for attention, not a critical error.
Unverified	Purple shield with an exclamation mark: verification could not be fully carried out. It is not a confirmed thesis error.

Execution status and feature labels

Badge	Meaning and use
In progress	Blue-grey spinner: checks are still running. In the All checks summary, its number counts running checks.
Failed	Red circle with an exclamation mark: execution failed. This differs from a critical finding with a cross.
Not applicable	Grey circle with a question mark: the check is not applicable. Read its explanation; this does not establish overall compliance.
0	Green circle with a check and zero: no matching finding in the displayed scope, not an overall certificate.
Beta	Purple flask: a beta-feature label. It is not an Unverified warning or a finding count.

The compact Unverified summary may show only a purple shield and number; hover for details. Read the explanations for incomplete or inconclusive checks. The blue Pilot shield in the header marks the system’s pilot phase. The bell’s red dot means unread notifications. Neither is a thesis finding category.

4.6 Give feedback on a finding

If a finding is accurate or seems incorrect, give feedback within its card. This feedback concerns that individual finding.

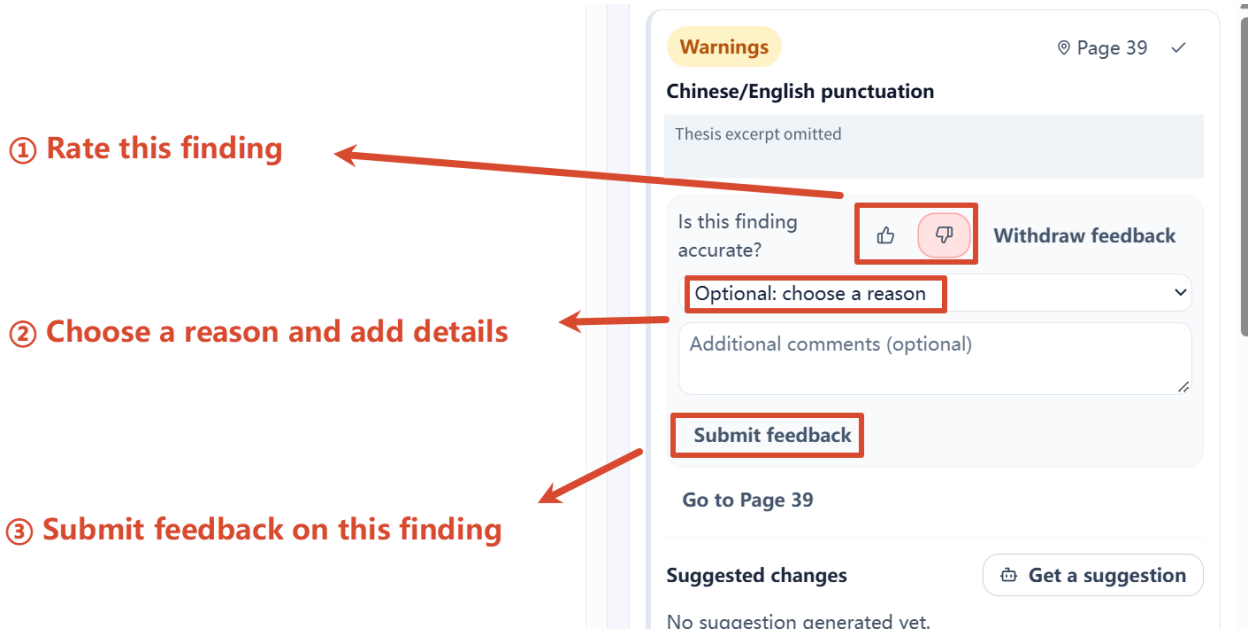

Figure 10 Finding rating, optional reason and submission

1. Choose thumbs up or thumbs down under Is this finding accurate?
2. Select a reason and add comments if useful. Explain the location and reason for the problem.
3. Select Submit feedback. Use Withdraw feedback to remove a submitted rating.

Feedback does not automatically remove a finding or edit the thesis. It is separate from suggestion feedback and the Feedback control in the page header.

4.7 Review suggestions and edit your source

Some findings support generated suggestions. These explain possible changes, but do not replace your judgement about the thesis or university requirements.

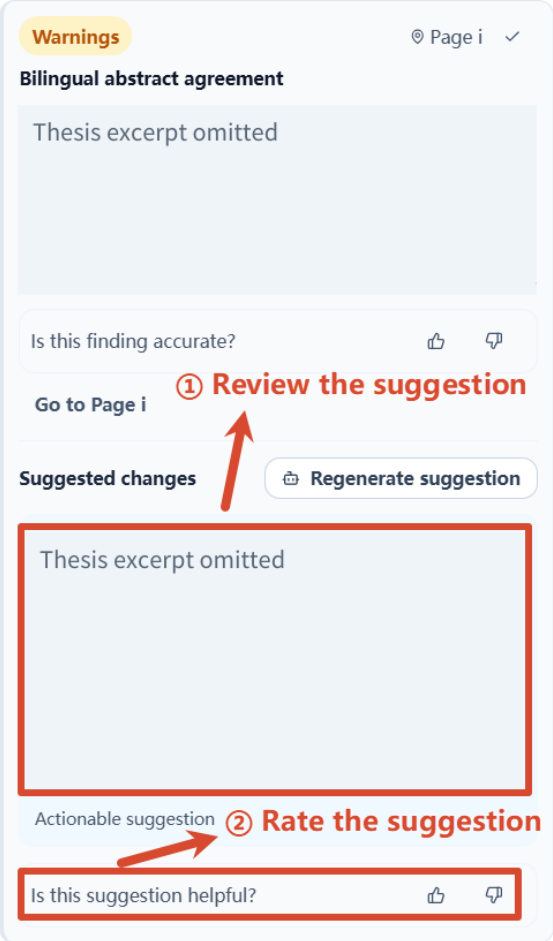

Figure 11 Suggestions and feedback; thesis excerpts omitted

1. Select Get a suggestion on a supported card, wait for the response, and read it in full.
2. Check it against the thesis, then edit your local Word or LaTeX source. The system does not rewrite the uploaded PDF.
3. You can rate the suggestion. Export a revised PDF and submit it through Upload thesis.

If a suggestion cannot be generated, retry later or review manually. Resume checks does not analyse a newly revised thesis file.

4.8 Download a report

Check the filename in the report header, select Download report, then choose a format. This exports the review findings, not the original thesis PDF.

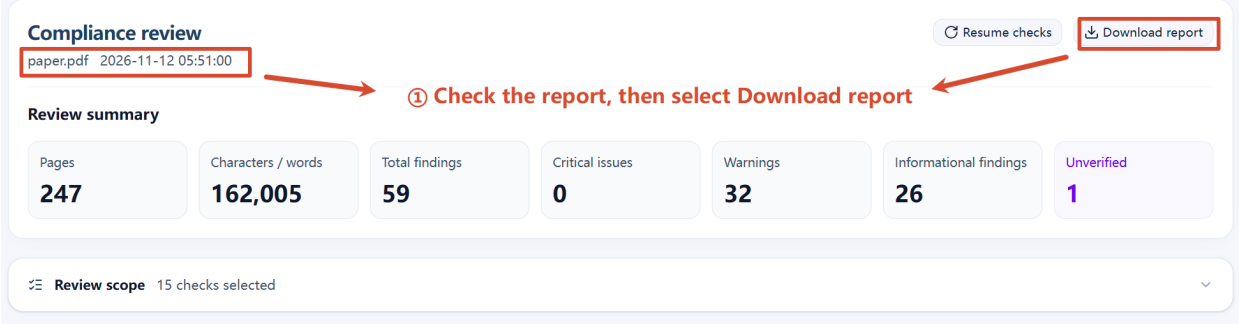

Figure 12 Download control

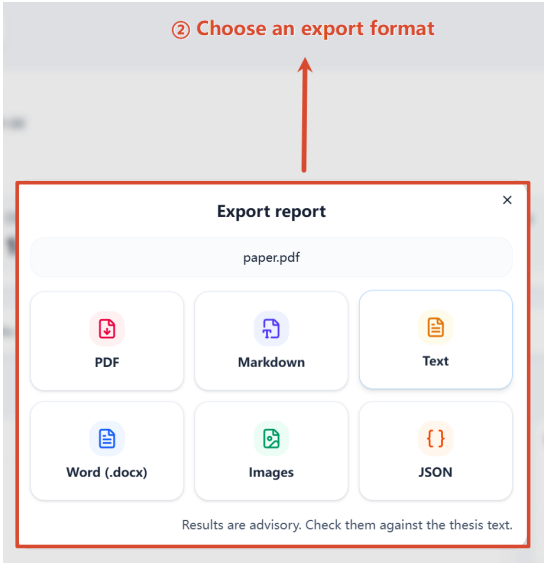

Figure 13 Choose a format

1. Choose PDF for reading/printing, Word for further editing, or Markdown or Text for a text copy.
2. Choose Images to save report pages as images, or JSON for structured data. Select the format you need.
3. Exports use the interface language at the start of download. Wait for English explanations to be ready before exporting an English report.

Switching language mid-export does not mix languages in that download. Quotations and filenames retain their original language. Cancelling an export does not cancel the review.

4.9 Find saved reports

Select Report history in the sidebar to view your saved reports. Search by filename, then check the creation time to distinguish thesis versions.

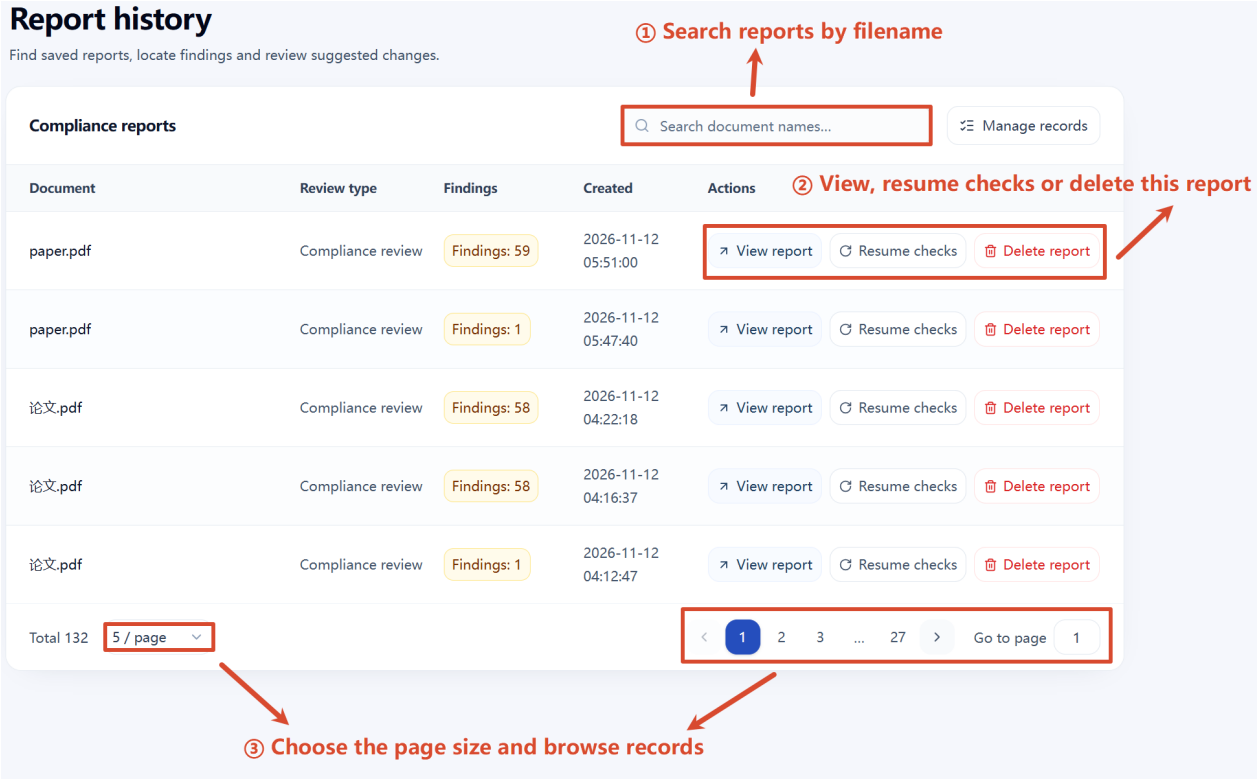

Figure 14 Search, report actions and pagination

1. Search using part of the filename. Hover over a shortened filename to see the full name.
2. View report opens a report. Resume checks reuses its saved PDF. Delete report opens a confirmation dialog.
3. Use the page-size selector and page controls to browse records. Check filenames and times rather than relying on row order alone.

Reports are linked to the submitting account. When an email link asks you to sign in, use that account.

4.10 Resume checks on a saved report

Use Resume checks for new, failed or inconclusive checks. It uses the PDF stored with the report, not a file you have since revised on your computer.

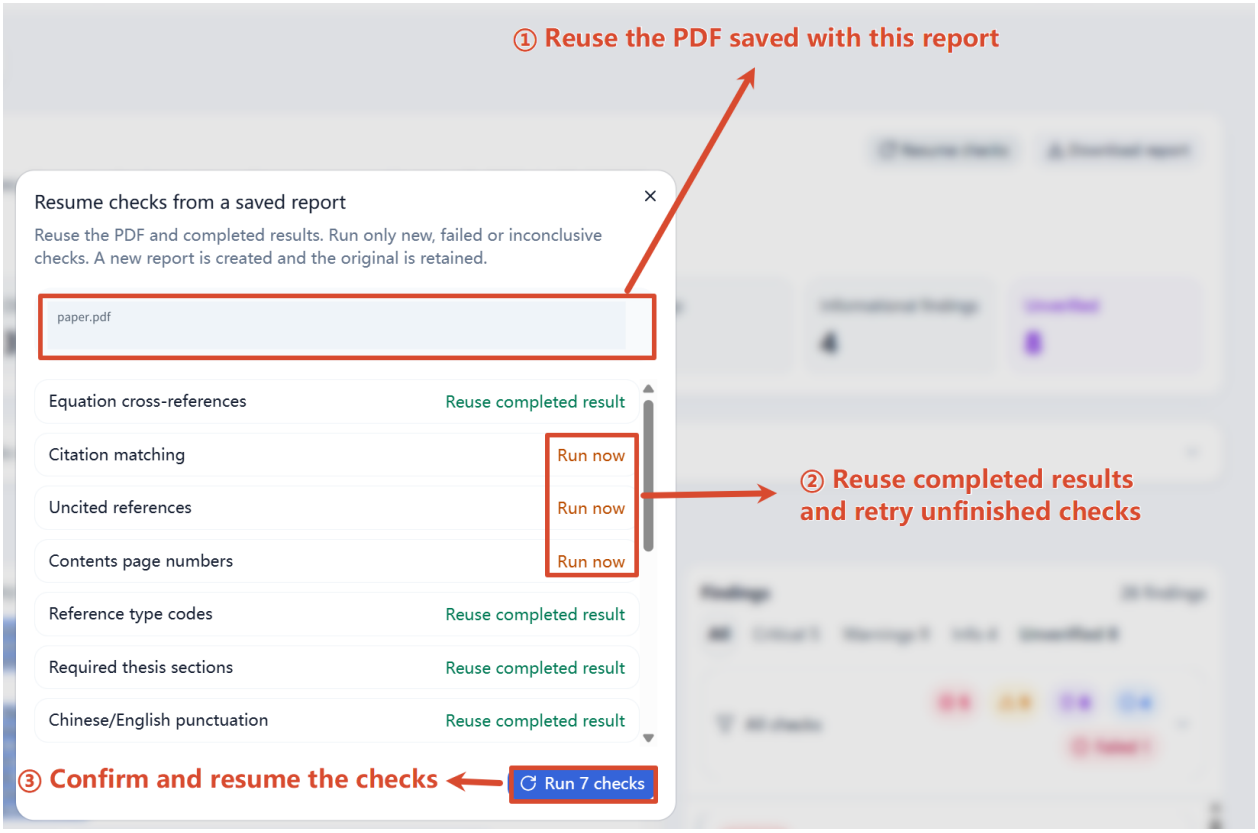

Figure 15 Saved PDF, reused results and checks to run

1. Select Resume checks in the history list or report header and confirm the saved file.
2. Review which completed results will be reused and which checks will run.
3. Confirm and run. A new report is created and the original is retained. A successful report uses the daily allowance.

If the thesis has changed, upload the revised PDF for a new review. Resuming checks on an old PDF does not validate the revised thesis.

4.11 Delete one report

After selecting Delete report, read the confirmation dialog carefully. Deletion cannot be undone; download any report you need to keep first.

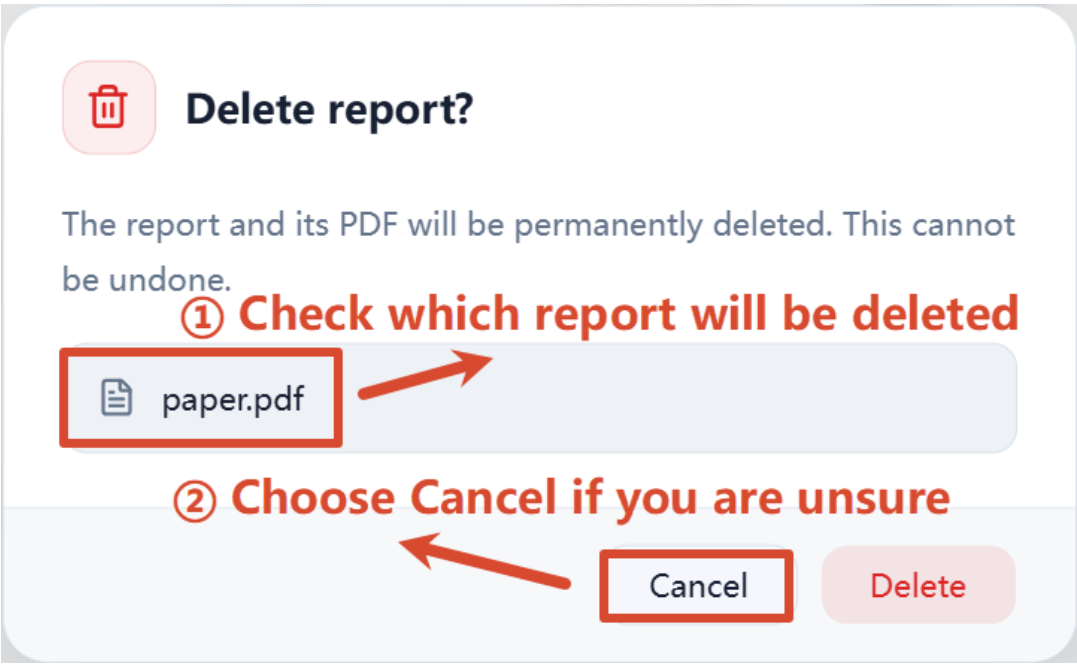

Figure 16 Check the file before deleting; cancel if unsure

1. Check the filename and make sure you do not need that version.
2. Choose Cancel if unsure. Select Delete only when you no longer need the report.
3. The report and stored PDF are removed from the system. Your local file is unaffected, and used allowance is not restored.

Batch deletion is also irreversible. The next page explains selecting multiple records.

4.12 Manage multiple records

Select Manage records at the upper right of Report history. Select records, then check the selection count before taking action.

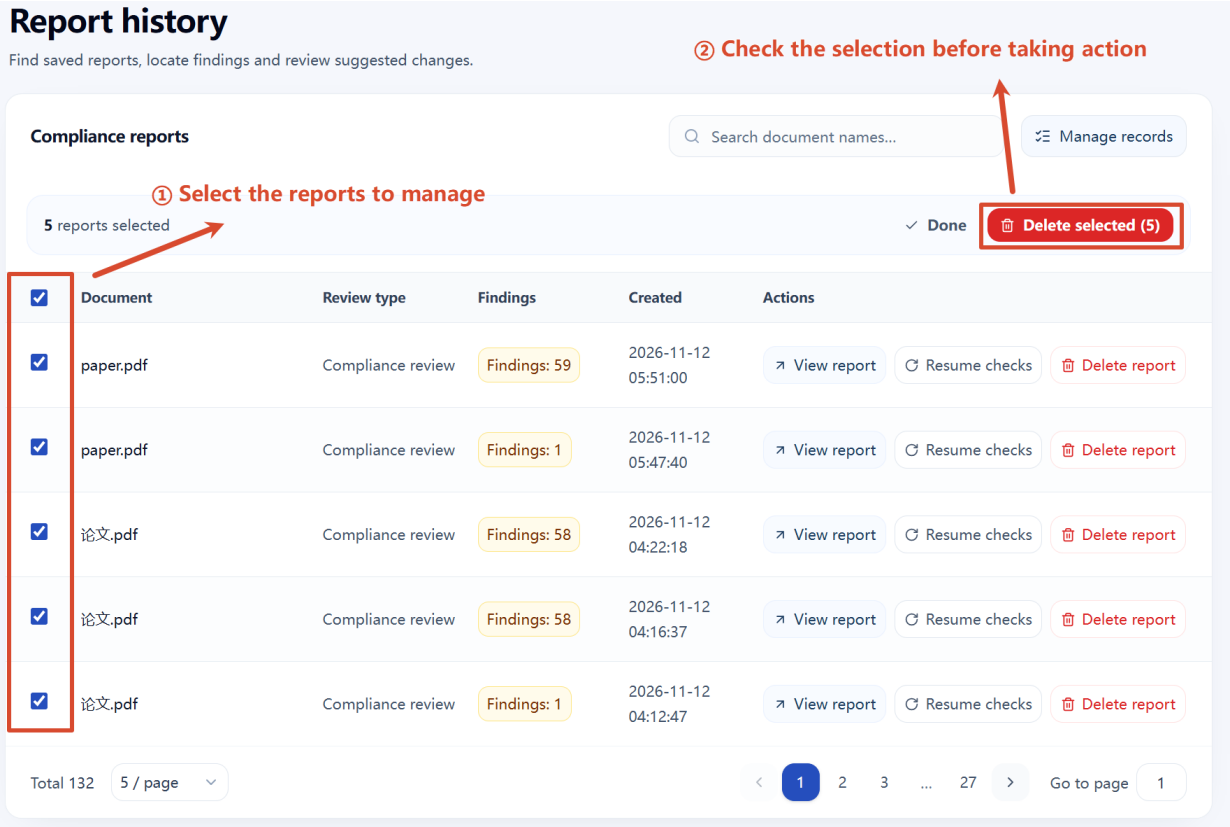

Figure 17 Selection, selected count and batch deletion

1. Select the reports to manage. If you use the header checkbox, check which records are actually selected.
2. Review the selected count and filenames.
3. Select Delete selected and confirm if you want to remove them. Select Done to leave management mode.

Do not batch-delete before checking the files and count. Export reports you need to keep first.

5 Other features

5.1 Read notifications

Select the bell in the page header to open Notifications. A red dot indicates unread notifications, not a critical thesis finding.

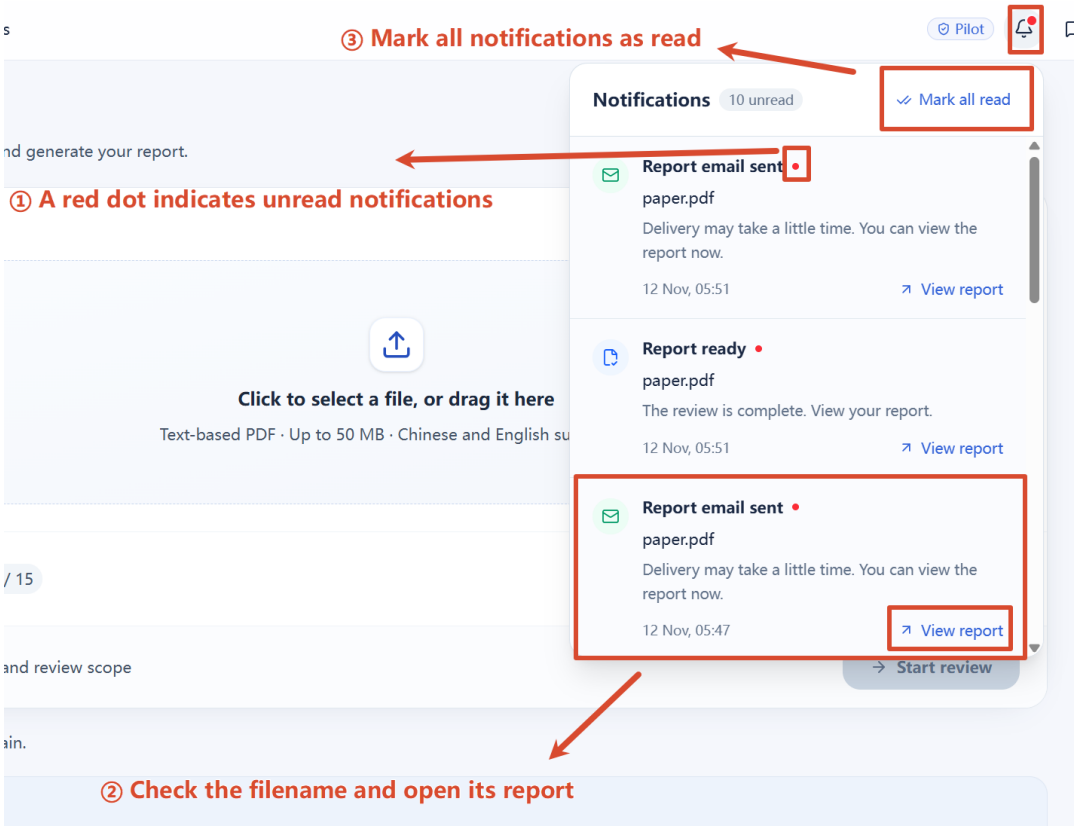

Figure 18 Bell, unread indicators, filenames and Mark all read

1. Check the filename, time and event, such as Report ready, Report email sent, a failed review or failed email delivery.
2. Select View report on the relevant notification to open that file's report.
3. Use Mark all read after checking the notifications. Marking a notification as read does not delete the report.

Report email sent means the mail server accepted the message, not that it is already visible in your inbox. Check Notifications or Report history directly for the report.

5.2 Change preferences and sign out

Open the user menu at the lower left and select Settings. Language and appearance are separate preferences; they do not change the thesis or review decisions.

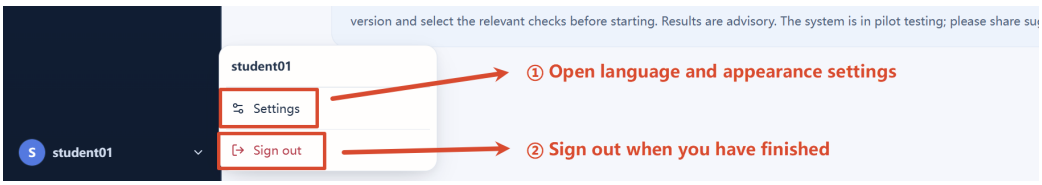

Figure 19 Open the user menu

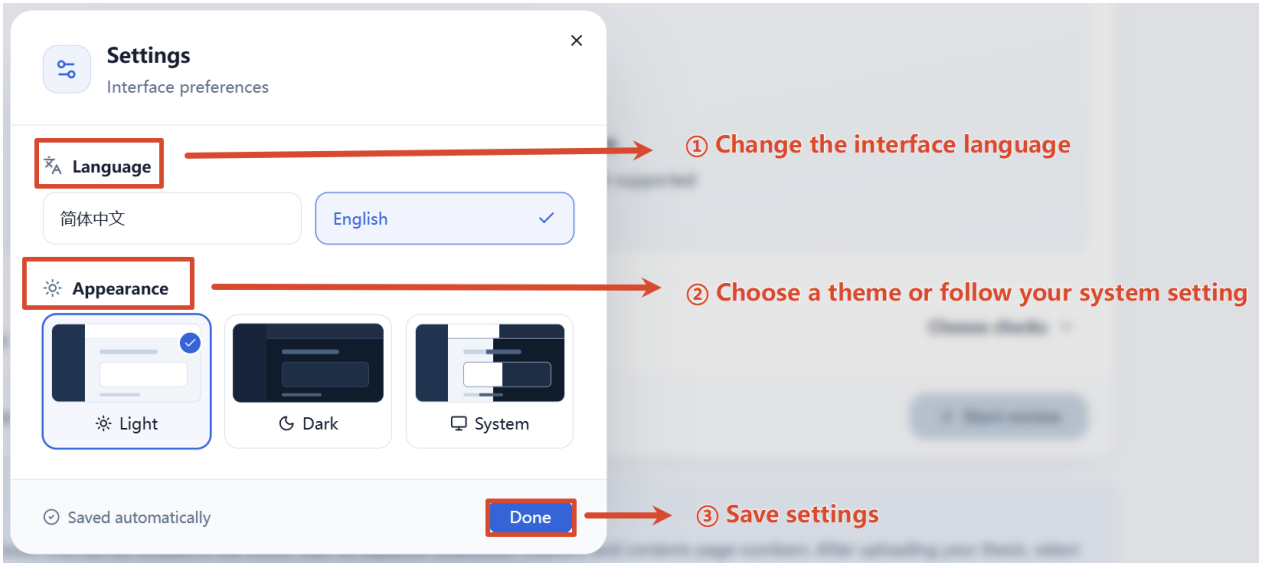

Figure 20 Language and appearance

1. Choose 简体中文 or English. Interface text and report explanations follow the selection; allow time for English explanations to prepare.
2. Choose Light, Dark or System. System follows your device's light/dark preference. The sign-in illustration is unaffected.
3. Select Done to leave Settings. To leave the account, select Sign out in the user menu.

Quotations and filenames are not translated. Exports use the language at the start of download; emails use the language at submission.

5.3 Send feedback about the system

For feedback about the overall experience, interface, response speed or reliability, select Feedback in the page header. This is separate from rating an individual finding.

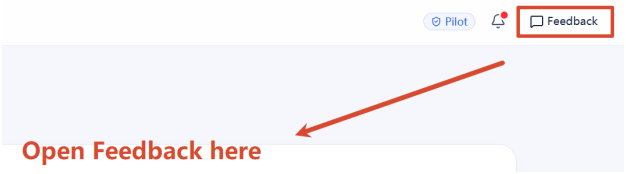

Figure 21 Feedback entry

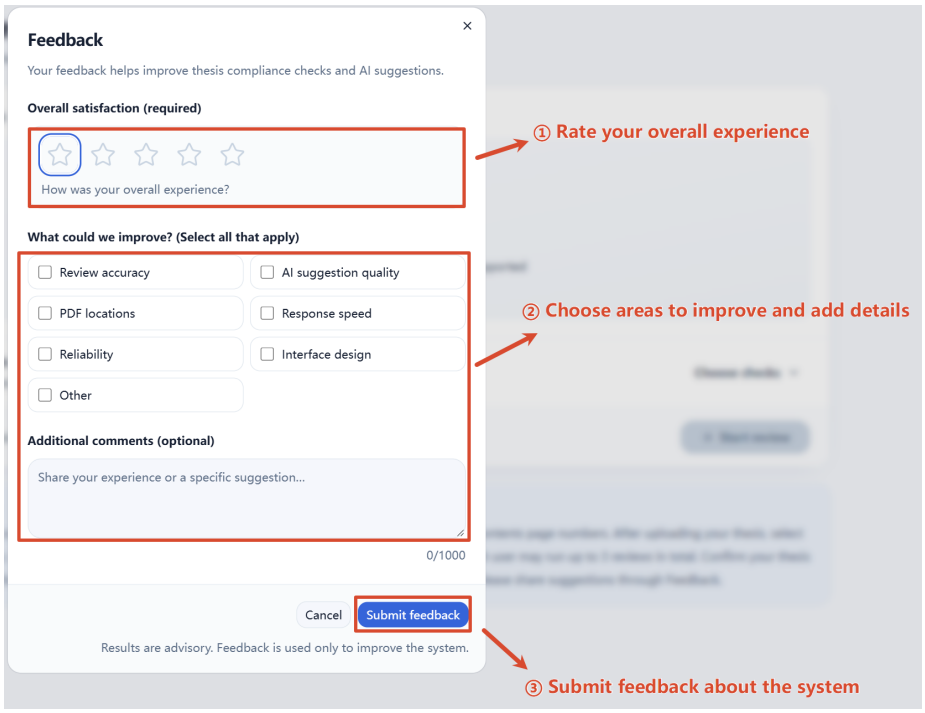

Figure 22 Complete and submit

1. Choose an overall satisfaction rating. This is required.
2. Select any areas that could be improved and add comments if useful, up to 1,000 characters.
3. Select Submit feedback and wait for confirmation. Describe the steps, expected behaviour and actual result to help maintainers understand the issue.

Do not include passwords, verification codes or other sensitive credentials. Use the relevant finding card for feedback about a specific finding.

5.4 Open a report from an email

After a report is generated, the system sends a notification to the email address associated with your account. The email provides a report link and does not require a reply.

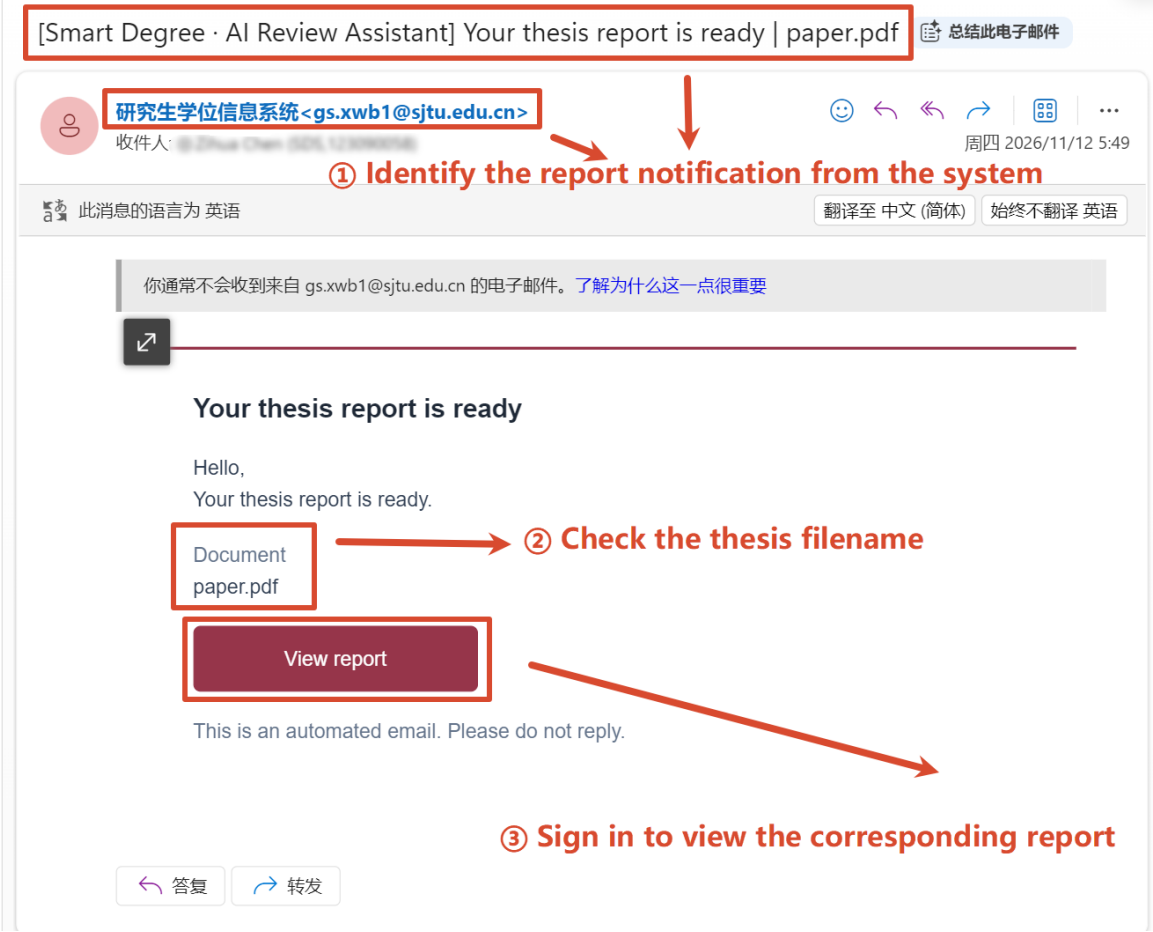

Figure 23 Report notification email, filename and report link

1. Check the system name in the subject and the thesis filename to identify the report.
2. Select View report. If prompted, sign in with the account that submitted the thesis.
3. The email and button use the interface language selected at submission. That language is retained through sign-in.

If no email arrives, check your spam folder and sign in to view Report history directly. Switching language later does not change the email language of an already submitted review.

6 Frequently asked questions

Why is my PDF unsuitable?

It must be a degree thesis in text-based PDF format, no larger than 50 MB. Unrelated PDFs, scans and image-only files are unsuitable. Export from the source and check that body text can be selected and copied.

No email has arrived. Is the review unfinished?

Not necessarily. Email may be delayed or filtered into spam. Sign in and check Notifications and Report history instead of relying only on email.

Is a thesis with no findings ready to submit?

It does not establish full compliance. Check whether the selected checks completed and whether anything is Unverified or inconclusive, then review the thesis against university requirements.

More questions

Why is there no exact highlight after selecting a finding?

Open Reading tools and check the highlight mode. Some findings have only page-level locations; read the surrounding text on the indicated page.

Should I use Resume checks after revising the thesis?

No. Resume checks still uses the PDF saved with the old report. Export the revised thesis as a new PDF and upload it for a new review.

Are stopping, cancelling an export and deleting the same?

No. Stopping cancels a review task. Cancelling an export stops download preparation. Deleting removes a saved report and its stored PDF. A successful cancellation does not count toward the allowance; deleting a completed report does not restore a use.

> For other issues, use Feedback and include the steps and error message. Do not share passwords or verification codes.

Appendix: Check reference

These are the 15 checks represented in this interface version. The descriptions explain scope; they are not additional thesis-formatting requirements. Follow the current interface for availability, execution results and applicability.

1. Equation cross-references

Check that equations cited in the text have matching visible equation numbers.

2. Citation matching

Match numbered citations to entries in the reference list.

3. Uncited references

Identify reference-list entries with no citation in the document; review flagged entries manually.

4. Contents page numbers

Compare contents page numbers with the pages containing the corresponding headings.

5. Reference type codes

Check for missing or invalid reference type codes, such as [J] for journal articles, where required.

6. Required thesis sections

Check that required thesis sections are present.

7. Chinese/English punctuation

Find English punctuation used incorrectly in Chinese prose, or Chinese punctuation used incorrectly in English prose.

8. Chinese keyword count

Check that the Chinese keyword list contains 3–8 keywords.

9. Abstract cross-references

Flag figure, table and equation numbers and numbered citations in Chinese and English abstracts.

10. Chapter page breaks

Check that each chapter starts on a new page, without text from the previous chapter above its heading.

11. Reference verification

Look up cited publications to assess whether they exist. Distinguish suspected nonexistent references from incomplete searches.

12. Chinese character errors

Find clear Chinese character errors in the main text. This is not a general grammar, style or English spelling check.

13. Bilingual keyword match

Check whether Chinese and English keyword lists express matching concepts and correspond to each other.

14. Bilingual abstract agreement

Compare the abstracts for substantive differences in topic, methods, results and conclusions.

15. Numerical claim verification (Beta)

Check numerical claims in the abstract against experimental results in the corresponding research chapters. This is not a general assessment of academic quality.
